

**Commerzbank
Tower**

Frankfurt, Germany

Fast and secure document transportation with Telelift UniCar including AutoDropAutoLoad (ADAL) function

The Customer, the Requirements, the Solution

The Commerzbank tower completed in 1997 was the first high-rise building in Frankfurt built as a pure steel frame construction. With a height of 260 metres and a mast top of 40 metres the building is built on more than 100 reinforced concrete stakes rammed into the surface up to almost 50 metres.

Every storey has a basic floor space of 1,630 square metres. Thus the tower provides space for 2,100 persons. Commerzbank Tower was the highest building in Europe until 2005.

Security

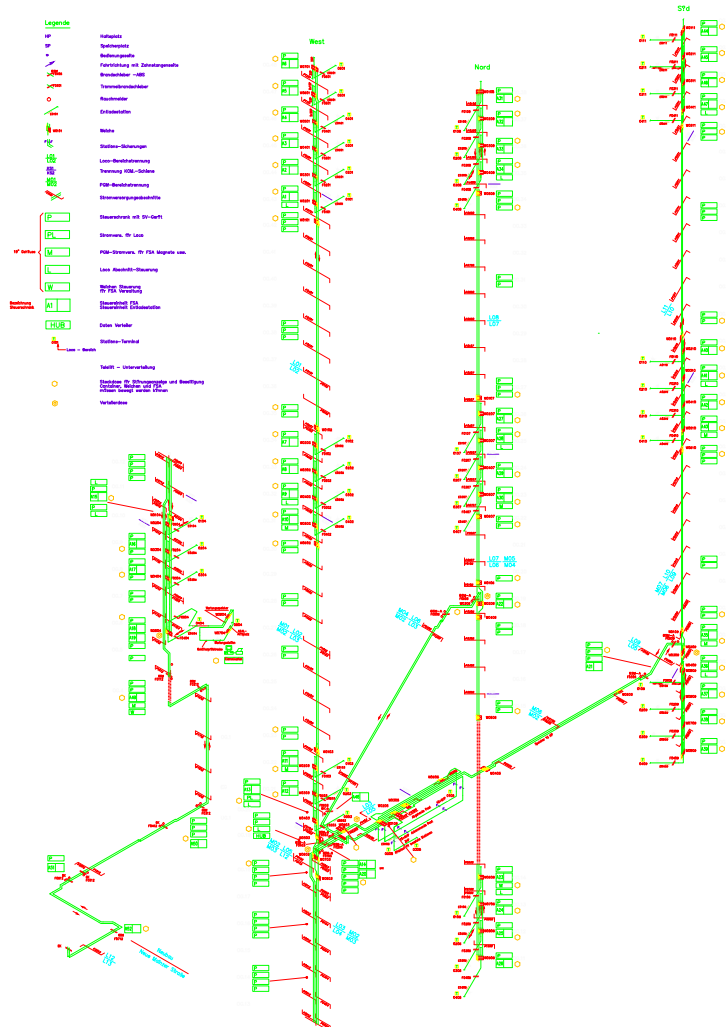

The Solution:

Track length: ca. 1100 m
 Floors: 63
 No. of vehicles: ca. 400
 No. of stations: 100
 Control: EMK-III
 Commissioning: 1997

Benefits:

All containers are equipped with the automatic AutoDropAutoLoad (ADAL) function. This ensures 100 % precised delivery of the goods and increases the availability of the conveyor system. Additionally the automatic electronic locking of the container lids, SecureMail System, protects against unauthorised access during transport.
