

Air Cargo Center

**Vienna Airport,
Austria**

Fast and secure document transportation with the Telelift UniCar in the Vienna Cargo hub terminal.

The Customer, the Requirements, the Solution

The project Vienna Air Cargo Center includes extension of freight and forwarder halls together with all associated office spaces. The new Air Cargo Center enables flexible effective freight clearance without crossing material flows. Handling of airfreight pallets and containers is supported by modern materials handling systems. For intermediate storage of special goods several special warehouses as for example hazardous material storage, according to the

latest state of the art are integrated in the total complex. After commissioning of the air cargo hub the two older freight buildings be knocked down. The freight halls will be extended for another 9,000 m² on this surface in further construction stages according to requirements.

Security

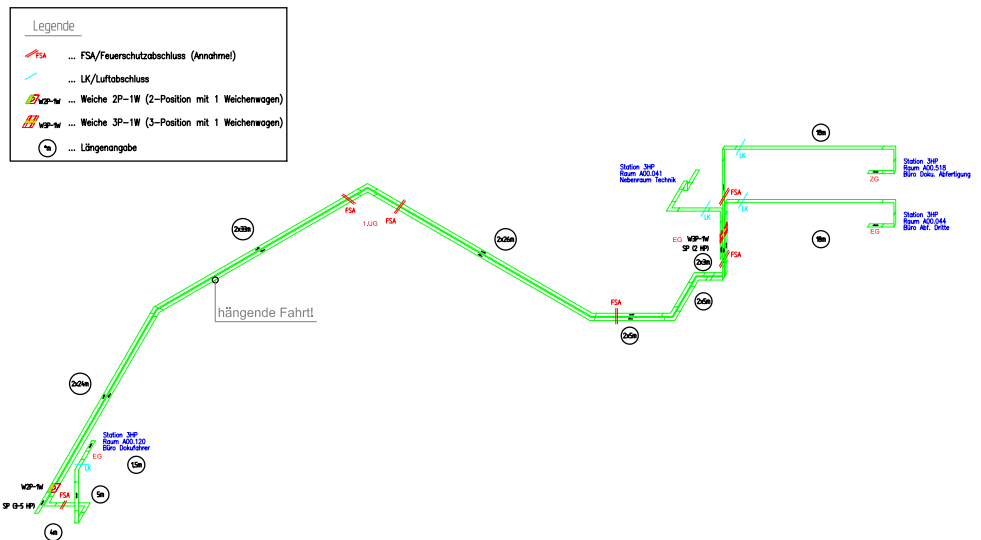

The Solution

Track length: 210 m
 No. of vehicles: 8
 No. of stations: 4
 Commissioning: 2005
 Control: EMK-III

Benefits:

Transportation with the Telelift UniCar offers protection against unauthorized access and manipulation. The transport is a fully monitored and documented process. More safety due to minimal personnel in security areas and higher protection for security-related transport.
